DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a magnetic sensor, classified in class 324, subclass 252.
- II. Claims 6-8, drawn to method of manufacture of a magnetoresistive sensor, classified in class 438, subclass 48.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made using conventional semiconductor and circuit board fabrication techniques, and the method of manufacturing can further be used to fabricate other layered substrate semiconductor wafer structures.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
